

Ask yourself if your  
**washout** is  
pulling its weight.

**You depend on your washout** to eliminate silicone oil remnants and ensure a successful outcome. Studies show, however, that more than 65% of SilOil droplets in patients' eyes are under 2  $\mu\text{m}$  in size<sup>1</sup> – making them extremely difficult to get rid of.

**F4H5® WashOut is your best defence against emulsified SilOil residue** in anterior and posterior chambers. It effectively eliminates the vast majority of silicone oil from all groups of intraocular lenses, leaving them optically clear<sup>2</sup>.

**F4H5® is biocompatible and well-tolerated** with no known side effects.

**Trust F4H5® WashOut to get it out, everytime.**
